GROUP-6

STOCKSMART

INTRODUCTION

- StockSmart is a smart inventory management system that is designed for SMEs
- It helps shops, supermarkets, and warehouses manage stock more efficiently
- It aims to replace the manual or outdated methods used by shops and warehouses
- Common problems include stock shortages, overstocking, and expired products
- StockSmart provides real-time inventory tracking, automated alerts for low stock and expiry, and data insights to help businesses make faster and more accurate decisions.
- It offers a simple, affordable, and user-friendly digital solution.

PROBLEM STATEMENT

Problem Statement

- Small retailers, supermarkets, and warehouse managers often rely on outdated, expensive or manual inventory systems. This results in frequent stock shortages, overstocking, expired goods, and general inefficiency

Problem Impact

- Difficulty in tracking goods, buying and selling, high operating costs due to service fees, labour costs, etc.
- No data of cost/sales price
- No consideration for batches.

OBJECTIVES

To develop a simple and centralized inventory management system for SMEs

To enable real-time inventory tracking, updating, and transaction

To reduce losses caused by overstocking, stock shortages, and expired products, change in prices

To provide automated alerts for low stock and product expiry

To improve accuracy and operational efficiency in inventory management

To lower overhead costs for businesses through automation

METHODOLOGY

- Requirement analysis of users and current practices
- Study of existing systems and gaps
- Simple system design with key features
- Feasibility analysis (technical, operational, economic)
- Testing and validation for performance and accuracy

EXPECTED OUTCOME

- Reduced inventory losses
- Improved stock accuracy and real-time visibility
- Faster and more efficient management
- Better data-driven decision-making
- Lower overheads, Increased profitability, and efficiency
- Smooth shift from manual to digital systems

ServiceHub

- Platform to find and book local services
- Connects users with trusted professionals
- All services in one place

Problem

- Hard to find reliable local services
- No proper comparison of reviews
- Time-consuming booking process

Solution

- ServiceHub provides verified service providers
- Easy search and booking system
- Compare reviews and availability

Customers

Users who need services and book providers through the platform

Service Providers

Individuals or businesses offering services and managing bookings through the platform

Objectives

- Simplify and speed up service discovery and booking
- Connect users with trusted service providers
- Build trust through verified profiles and reviews
- Enable quick search, comparison, and booking
- Increase visibility for local providers
- Create an organized service marketplace

Key Features

- Dual login for seekers and providers
- Search & filter by category/location
- Ratings and reviews system
- Request–response service model
- Booking tracking and history
- Automated notifications and updates

Methodology

- Study existing service platforms to identify gaps
- Identify user needs (service seekers and providers)
- Design system features, user flow & system architecture
- Analyze feasibility (technical, operational, economic)

Expected Outcome

- Faster access to reliable services
- Improved trust via verified providers and reviews
- Convenient and time-saving booking
- More visibility and income for providers
- Better communication and coordination
- More organized and efficient marketplace

VolunteerHub

- Platform designed to connect individuals with nearby volunteering opportunities
- Helps users discover NGOs, events, and social impact activities based on their interests, skills, and availability
- Tracks participation and social impact

Background of the Project

- Many people want to volunteer but don't know where to start.
- NGOs struggle to find reliable volunteers.
- Existing systems are often unorganized or lack accessibility.
- There is a need for a smart, user-friendly platform to bridge this gap.

USERS OF THE SYSTEM

Volunteers:

Students, professionals, individuals interested in social work

Admins:

Manage platform, verify NGOs, monitor activities

NGOs/Organizations:

Groups looking for volunteers

Problem Statement

- Opportunities are scattered across multiple platforms
- Difficulty in finding trusted and verified NGOs
- Poor tracking of volunteer contributions

Problem Impact

- **Low volunteer participation and engagement**
- **Reduced trust and credibility in volunteering programs**
- **Inefficient recognition and motivation of volunteers**

Objectives of the Study

01

Develop a platform to
connect volunteers
and NGOs

02

Enable users to
track volunteering
hours and
achievements

03

Offer digital
certificates for
motivation

METHODOLOGY

Methodology – Requirement Identification

- **Study existing volunteering platforms**
- **Identify user needs and expectations**
- **Analyze challenges faced by NGOs and volunteers**

METHODOLOGY

Methodology – Feasibility Study.

- Technical Feasibility: Can be developed using web technologies
- Operational Feasibility: Easy for users and NGOs to operate
- Economic Feasibility: Low-cost development and maintenance

System Features

- **Browse verified NGOs**
- **Event registration and participation**
- **Track volunteer hours**
- **Earn digital certificates**
- **Personal dashboard for progress**

Expected Outcome

- **A fully functional volunteering platform**
- **Increased participation in social activities**
- **Better coordination between NGOs and volunteers**
- **Transparent tracking of contributions**

Thank You!
